

## Mathematics Practical Python Programming Language-I

Semester: III	Credits: 2	Subject Code: BSP32109	Lectures: 48
---------------	------------	------------------------	--------------

### Course Outcomes:

#### At the end of this course, the learner will be able to:

- Relate and demonstrate the use of built-in data structures "list" and "tuples".
- Compare and apply various control structures in Programming.
- Explain the basic concepts of Linear algebra in Python.
- Practice Linear Algebra problems using Python.
- Apply and analyze concepts of Python programming to solve problems based on Numerical Methods and Numerical Integration.
- Compare and contrast the rate of convergence of numerical methods using Python Programming.

### Practical 1: Introduction to Python

- Installation of Python
- Values and types: int, float and str,
- Variables: assignment statements, printing variable values, types of variables.
- Operators, operands and precedence: +, -, /, \*, \*\*, % PEMDAS(Rules of precedence)
- String operations: + : Concatenation, \* : Repetition
- Boolean operator:
- Comparison operators: ==, !=, >, =, <=
- Logical operators: and, or, not
- Mathematical functions from math, cmath modules.
- Keyboard input: input () statement

### Practical 2: Python Data Types

- Strings:
  - Length (Len function)
  - String traversal: Using while statement, Using for statement
  - String slice
  - Comparison operators (>, <, ==)
- Lists:
  - List operations
  - Use of range function
  - Accessing list elements
  - List membership and for loop
  - List operations
  - Updating list: addition, removal or updating of elements of a list

Board Of Studies	Name	Signature
Chairman (HoD)	Gitanjali Phadnis	

<ul style="list-style-type: none"> <li>● Tuples:             <ul style="list-style-type: none"> <li>○ Defining a tuple,</li> <li>○ Index operator,</li> <li>○ Slice operator,</li> <li>○ Tuple assignment,</li> <li>○ Tuple as a return value</li> </ul> </li> </ul>	
--	--

<b>Practical 3: Control statements in Python-I</b>	
<ul style="list-style-type: none"> <li>● Conditional and alternative statements, Chained and Nested Conditionals: if, if-else, if-elif-else, nested if, nested if-else</li> <li>● Looping statements such as while, for etc, Tables using while.</li> </ul>	

<b>Practical 4: Control statements in Python-II</b>	
<ul style="list-style-type: none"> <li>● Functions:             <ul style="list-style-type: none"> <li>○ Calling functions: type, id</li> <li>○ Type conversion: int, float, str</li> <li>○ Composition of functions</li> <li>○ User defined functions, Parameters and arguments</li> </ul> </li> </ul>	

<b>Practical 5: Applications: Matrices, Determinants</b>	
<ul style="list-style-type: none"> <li>● Matrix construction, eye(n), zeros(n, m) matrices</li> <li>● Addition, Subtraction, Multiplication of matrices, powers, and inverse of a matrix.</li> <li>● Accessing Rows and Columns, Deleting and Inserting Rows and Columns</li> <li>● Determinant, reduced row echelon form, nullspace, column space, Rank</li> </ul>	

<b>Practical 6: System of Equations</b>	
<ul style="list-style-type: none"> <li>● Solving systems of linear equations (Gauss Elimination Method, Gauss Jordan Method, LU- decomposition Method)</li> <li>● Eigenvalues , Eigenvectors, and Diagonalization</li> </ul>	

<b>Practical 7: RSA Encryption</b>	
<ul style="list-style-type: none"> <li>● Ceaser Cipher</li> <li>● Problem based on RSA algorithm</li> </ul>	

<b>Board Of Studies</b>	<b>Name</b>	<b>Signature</b>
Chairman (HoD)	Gitanjali Phadnis	<i>G.M. Phadnis</i>

<b>Practical 8: Roots of equations</b>	
<ul style="list-style-type: none"><li>• Roots of Equations</li><li>• Newton-Raphson Method</li><li>• False Position (Regula Falsi) Method</li></ul>	

<b>Practical 9: Numerical integration</b>	
<ul style="list-style-type: none"><li>• Numerical Integration:<ul style="list-style-type: none"><li>○ Trapezoidal Rule,</li><li>○ Simpson's 1/3rd Rule,</li><li>○ Simpson's 3/8th Rule</li></ul></li></ul>	

<b>Recommended Text Books:</b>
